==BITWISE OPERATOR==:-Bitwise operator are a kind of operator set provided by c.

     These operator are used to manipulate bits of an integer expression.

    ==Ex:- ==&,^,|,&&,||

    &->Bitwise AND
    ^->bitwise XOR(exclusive OR)
    |->Bitwise OR(inclusive OR)
    &&->Logical AND
    ||->Logical OR

==TERANARY OPERATOR (OR) CONDITIONAL OPERATOR== :-it takes three operands condition followed by a question mark.If the condition is true followed by colon and finally the expression to execute if the condition is false

    ==EX:-==?:
